

Environmental Policy for Solar Solutions Limited

As a professional renewable energy company, our operations revolve around the implementation of renewable energy sources (wind turbines, solar panels and solar water heaters). Through our work, our clients and Malta are avoiding tons of emissions from the power station yearly. Solar Solutions Ltd is committed to continually improve its operations to minimise the environmental impact and prevent pollution.

To meet this commitment, we will:

- Comply with all applicable environmental laws, regulations and guidelines issued by the local authorities that relate to our nature of operation.
- Aim towards a zero carbon footprint for electricity used at our offices.
- Minimise the amount of paper waste that we generate from our activities by promoting the principle of reduce, re-use and recycle and implement proper waste management practices for our packaging waste.
- Minimise the air pollution generated from the use of company vehicles.
- Monitor our environmental performance and periodically audit our operations to ensure environmental compliance.
- Optimise installations through scientific data collected yearly from installed systems on the Maltese Islands.

To implement this policy we have adopted an Environment Management System, based on the requirements of ISO 14001:2004, which will form an integral part of our Quality and Environmental Management System.
